

G-Ware Compatibility for XAP and PSR1212 products

Description

As ClearOne audio conferencing and sound reinforcement products are enhanced, it is often necessary to upgrade unit firmware and/or G-Ware software to take advantage of the latest features and functionality. Use the chart below to determine which firmware and software versions are compatible. Choose the G-Ware version row and find where it intersects with your product. The compatible firmware versions are indicated with a dot.

Example

If you choose G-Ware 5.0.0, you will see that XAP 800 3.0.0 firmware version is compatible but that XAP 400 1.0.1 firmware version is not. To use this XAP 400 with G-Ware 5.0.0, you will need to upgrade it to firmware version 2.0.0.
